**Thursday 14 May 2020**

Afternoon (Time: 1 hour 30 minutes)

Paper Reference **WME01/01**

**Mathematics**

**International Advanced Subsidiary/Advanced Level**  
**Mechanics M1**

**You must have:**

Mathematical Formulae and Statistical Tables (Blue), calculator

Total Marks

**Candidates may use any calculator permitted by Pearson regulations. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.**

### Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*
- You should show sufficient working to make your methods clear.  
Answers without working may not gain full credit.
- Whenever a numerical value of  $g$  is required, take  $g = 9.8 \text{ m s}^{-2}$ , and give your answer to either 2 significant figures or 3 significant figures.

### Information

- A booklet 'Mathematical Formulae and Statistical Tables' is provided.
- There are 8 questions in this question paper. The total mark for this paper is 75.
- The marks for each question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*

### Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- If you change your mind about an answer, cross it out and put your new answer and any working underneath.

**Q2**

**(Total 14 marks)**

A particle of mass  $10\text{ kg}$  is placed on a fixed rough inclined plane. The plane is inclined to the horizontal at an angle  $\alpha$ , where  $\tan \alpha = \frac{3}{4}$ . The particle is held in equilibrium by a force of magnitude  $P$  newtons, which acts up the plane, as shown in Figure 1. The line of action of the force lies in a vertical plane that contains a line of greatest slope of the plane. The coefficient of friction between the particle and the plane is  $\frac{1}{2}$ .

- (a) Find the normal reaction between the particle and the plane. (2)
- (b) Find the greatest possible value of  $P$ . (4)
- (c) Find the least possible value of  $P$ . (2)

4.

Figure 2

A non-uniform beam  $AB$  has length 8 m and mass  $M$  kg.

The centre of mass of the beam is  $d$  metres from  $A$ .

The beam is supported in equilibrium in a horizontal position by two vertical light ropes. One rope is attached to the beam at  $C$ , where  $AC = 2.5$  m and the other rope is attached to the beam at  $D$ , where  $DB = 2$  m, as shown in Figure 2.

A gymnast, of mass 64 kg, stands on the beam at the point  $X$ , where  $AX = 1.875$  m, and the beam remains in equilibrium in a horizontal position but is now on the point of tilting about  $C$ .

The gymnast then dismounts from the beam.

A second gymnast, of mass 48 kg, now stands on the beam at the point  $Y$ , where  $YB = 0.5$  m, and the beam remains in equilibrium in a horizontal position but is now on the point of tilting about  $D$ .

The beam is modelled as a non-uniform rod and the gymnasts are modelled as particles.

Find the value of  $M$ .

Q4

(Total 8 marks)

5. A particle  $P$  is moving in a plane with constant acceleration.  
 The velocity,  $\mathbf{v} \text{ m s}^{-1}$ , of  $P$  at time  $t$  seconds is given by

$$\mathbf{v} = (7 - 5t)\mathbf{i} + (12t - 20)\mathbf{j}$$

- (a) Find the speed of  $P$  when  $t = 2$  (3)
- (b) Find, to the nearest degree, the size of the angle between the direction of motion of  $P$  and the vector  $\mathbf{j}$ , when  $t = 2$  (3)

The constant acceleration of  $P$  is  $\mathbf{a} \text{ m s}^{-2}$

- (c) Find  $\mathbf{a}$  in terms of  $\mathbf{i}$  and  $\mathbf{j}$  (3)
- (d) Find the value of  $t$  when  $P$  is moving in the direction of the vector  $(-5\mathbf{i} + 8\mathbf{j})$  (4)

6.

**Figure 3**

A railway engine of mass 1500 kg is attached to a railway truck of mass 500 kg by a straight rigid coupling. The engine pushes the truck up a straight track, which is inclined to the horizontal at an angle  $\alpha$ , where  $\sin \alpha = \frac{7}{25}$ . The coupling is parallel to the track and parallel to the direction of motion, as shown in Figure 3.

The engine produces a constant driving force of magnitude  $D$  newtons. The engine and the truck experience constant resistances to motion, from non-gravitational forces, of magnitude 1200 N and 500 N respectively.

The thrust in the coupling is 2000 N.

The coupling is modelled as a light rod.

(a) Find the acceleration of the engine and the truck.

(4)

(b) Find the value of  $D$ .

7.

Figure 4

One end of a light inextensible string is attached to a particle  $A$  of mass  $5m$ . The other end of the string is attached to a particle  $B$  of mass  $3m$ . The string passes over a small, smooth, light fixed pulley. Particle  $A$  is held at rest with the string taut and the hanging parts of the string vertical, as shown in Figure 4.

Particle  $A$  is released.

- (a) Find, in terms of  $m$  and  $g$ , the magnitude of the force exerted on the pulley by the string while  $A$  is falling and before  $B$  hits the pulley.

(8)

- (b) State how, in your solution to part (a), you have used the fact that the pulley is smooth.

**Figure 5**

The acceleration-time graph shown in Figure 5 represents part of a journey made by a car along a straight horizontal road. The car accelerated from rest at time  $t = 0$

- (a) Find the distance travelled by the car during the first 4 s of its journey. (2)
- (b) Find the total distance travelled by the car during the first 26 s of its journey. (6)
