|---|----------|-------------------------|-----------------------|
| Candidate surname | | Other na | mes Britishs. |
| Pearson Edexcel International GCSE (9–1) | Cen | tre Number | Candidate Number |
| Time 1 hour 15 minutes | | Paper reference | ICH1/2C |
| Chemistry PAPER 2C | | | |
| You must have: Calculator, ruler | | | Total Marks |

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
 - there may be more space than you need.
- Some questions must be answered with a cross in a box \boxtimes . If you change your mind about an answer, put a line through the box \boxtimes and then mark your new answer with a cross \boxtimes .

Information

- The total mark for this paper is 70.
- The marks for **each** question are shown in brackets
 - use this as a guide as to how much time to spend on each question.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- Good luck with your examination.

BLANK PAGE

(a) (i) Give the name of the industrial equipment.

(1)

(ii) Give one use of the fuel oil fraction.

(1)

(iii) Give the names of fraction A and fraction F.

(2)

fraction A.....

fraction F.....

| | | http. |
|-----|---|--------|
| (b) | One compound in the gasoline fraction is the alkane octane (C_8H_{18}) as | nd one |
| | compound in the kerosene fraction is the alkane dodecane ($C_{12}H_{26}$) | |

These two alkanes are covalently bonded and have simple molecular structures.

(i) Give the general formula for the alkanes.

(ii) Explain, in terms of their structures, why $C_{12}H_{26}$ has a higher boiling point than C_8H_{18}

(3)

| (c) | Catalytic cracking | can be used to | convert the alkane C ₁₂ H ₂₆ | into more useful | products |
|-----|--------------------|----------------|--|------------------|----------|

(i) Give the name of the catalyst used for catalytic cracking.

(1)

(ii) Complete the equation for this cracking reaction.

(1)

$$C_{12}H_{26} \rightarrow C_9H_{20} + \dots$$

(Total for Question 3 = 10 marks)

| A student investigates the solubility of potassium nitrate in water. She measures the masses of potassium nitrate that dissolve in 25 cm³ of water at different temperatures. The table shows the student's results. One of the results is anomalous. | | | | | | | |
|---|----------|--------------------|------------------------------|-------------------------------------|----------------|-------------------|----------------------|
| 10 | 20 | 30 | 40 | 50 | 60 | 70 | COM |

(ii) The word equation for the fermentation process is ${\tt glucose} \, \to \, {\tt ethanol} \, + \, {\tt carbon} \, {\tt dioxide}$ Complete the chemical equation for this reaction.

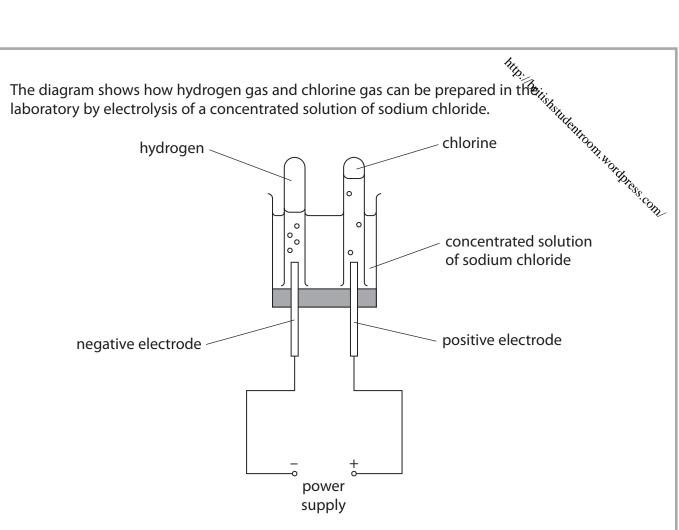

http://britishstudentroom, wordpress.con

 $C_6H_{12}O_6 \rightarrow \dots + \dots$

(Total for Question 5 = 14 marks)

(1)

(2)

| (b) The ionic half-equation for the formation of chlorine at the positive electrode is $2Cl^-\toCl_2+2e^-$ (i) State why this reaction is an oxidation reaction. | |
|--|-----------------|
| $2Cl^- \rightarrow Cl_2 + 2e^-$ | Ntros |
| (i) State why this reaction is an oxidation reaction. | (1) This con |
| (ii) Give the ionic half-equation for the formation of hydrogen at the negative ele | ectrode. (1) |
| (iii) State why it is safer to do this electrolysis in a fume cupboard. | (1) |
| (iv) Suggest why the volume of chlorine collected during this electrolysis is less than the volume of hydrogen collected. | (1) |

(c) In the chemical industry, chlorine can be produced by the electrolysis of molten sodium chloride.

The overall equation for this reaction is

$$2NaCl(l) \rightarrow 2Na(l) + Cl_2(g)$$

(i) Explain why sodium chloride needs to be molten rather than solid for electrolysis to occur.

(2)

(ii) Calculate the maximum volume, in dm³, of chlorine gas at rtp that can be obtained from 23.4 tonnes of molten sodium chloride.

 $[1 \text{ tonne} = 10^6 \text{ g}]$

 $[M_{\rm r} \text{ of NaCl} = 58.5]$

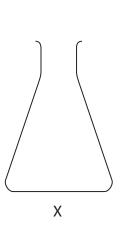

[molar volume of chlorine at rtp = $24 \,\text{dm}^3$]

Give your answer in standard form.

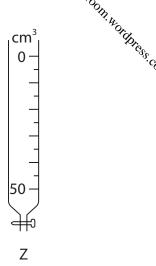

(4)

volume = dm³

(Total for Question 6 = 13 marks)

Diagrams are not to scale.

(a) Give the names of X, Y and Z.

(3)

(b) What is the colour of phenolphthalein in phosphoric acid?

(1)

- A blue
- colourless
- pink
- D red

| (c) The student titrates 25.0 cm³ of phosphoric acid with a solution of sodium hydroxide (NaOH). Table 1 shows the student's results. | | | | | |
|--|-------|-------|-------|-------|--|
| titration number | 1 | 2 | 3 | 4 % | |
| volume of NaOH added in cm ³ | 30.35 | 30.25 | 30.00 | 30.30 | |
| concordant results | | | | | |

Table 1

Concordant results are those within 0.20 cm³ of each other.

(i) Add ticks (\checkmark) to table 1 to show the concordant results.

(1)

(ii) Use your ticked results to calculate the mean (average) volume of NaOH added.

(2)

(d) Table 2 shows the titration results of another student.

| ole 2 shows the titration results of another student. | Auto:/Aritishstua | |
|---|-------------------|----------------|
| volume of phosphoric acid used in cm ³ | 25.0 chts | |
| concentration of sodium hydroxide solution in mol/dm ³ | 0.525 | . Words |
| mean volume of sodium hydroxide added in cm ³ | 30.40 | Northress. Com |
| Table 2 | | N |

Table 2

The equation for the reaction is

$$3NaOH \ + \ H_3PO_4 \ \rightarrow \ Na_3PO_4 \ + \ 3H_2O$$

(i) Calculate the amount, in moles, of NaOH in 30.40 cm³ of sodium hydroxide solution.

amount = mol

(ii) Calculate the amount, in moles, of H₃PO₄ in 25.0 cm³ of phosphoric acid.

(1)

amount = mol

(iii) Calculate the concentration, in mol/dm³, of the phosphoric acid.

(2)

concentration = mol/dm³
